

**There's a name for cats
without fast-acting protection
from hungry fleas.**

Vectra 
for Cats & Kittens™

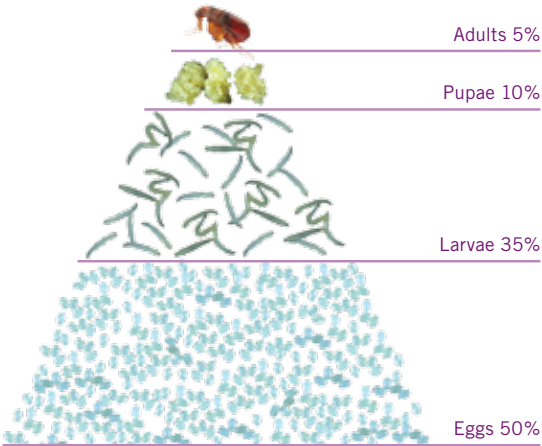

Vectra 
for Cats®

Please don't feed the parasites.

A fast-multiplying problem.

Fleas are more than a nuisance. These blood-sucking insects may actually transmit diseases to your cat or kitten that can be serious or even fatal. Anemia, flea allergy dermatitis (FAD), skin infections, bartonellosis, tularemia and tapeworms are just some of the flea-related problems that can endanger your cat's health. Fleas multiply rapidly. Just one female can lay more than 25 eggs a day, which can add up to hundreds and an infestation in no time. The best way to protect your cat from fleas and the dangerous diseases they may transmit is with a monthly application of flea protection all year long.

The quick solution for your cat. Vectra® for Cats & Kittens and Vectra for Cats®

Vectra is a monthly topical flea control that provides long-lasting protection against all stages of fleas. Applying it once a month all through the year provides relief from flea infestation and protection from disease transmission to your kitten or cat.

Fast-Acting

- ▼ Starts killing fleas within 2 hours.¹
- ▼ Protects against flea-borne diseases, including tularemia, rickettsiosis, bartonellosis and tapeworm.

Complete Flea Protection

- ▼ Protects cats from ALL stages of fleas: adults, eggs, larvae and pupae for 1 month.
- ▼ Insect growth regulator remains effective after exposure to sunlight.

Convenient

- ▼ Unique applicator makes treatment fast, easy and accurate.
- ▼ Can be used on kittens as young as 8 weeks of age.¹

**Keep your cat off
the lunch menu
with Vectra.**

Patented design makes application easy, clean and accurate.

The unique applicator makes it a snap to apply monthly flea protection to your cat.

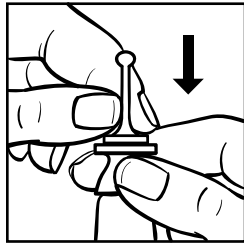

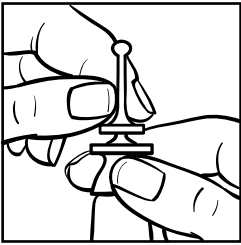

- ▼ **Easy does it:** The rounded tip minimizes risk of skin abrasions.
- ▼ **Hits the target:** Elongated tip makes it easy to reach your cat's skin through the hair coat.
- ▼ **One-piece simplicity:**
Top disk pierces the seal when compressed – no need to remove the cap.
- ▼ **No drips:** Nothing comes out until you squeeze the tube.
- ▼ **Precision instrument:**
Tested to ensure accurate dosing.

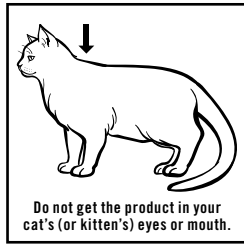

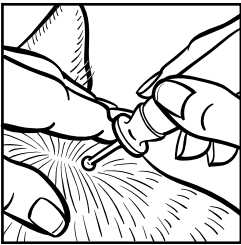

How to apply Vectra® to your cat.

Before administering Vectra for the first time, you should ask your veterinarian to demonstrate proper application technique.

1. **USE ONLY ON CATS.** Do not use on other animals.
2. Remove tube from package.
3. The cat should be standing or in a comfortable position for easy application.
4. Hold tube upright, pointing away from face, place thumb and index finger around the applicator tip under the large disk. With your other hand, grasp the stem of the applicator tip above small disk. Press down firmly on small disk until both disks meet, piercing the seal. (See illustration)

5. Part the hair down to the level of the skin and slowly apply the product at the base of the cat's or kitten's neck until the tube is completely empty, as shown in the diagram below. Avoid superficial application to the cat's or kitten's hair.

6. Repeat once a month or as recommended by your veterinarian.
7. For optimum control and prevention of adult fleas, flea eggs, flea larvae and flea pupae, year-round treatment is recommended.

Big, bad facts about tiny, terrible trouble.

The big chill doesn't always kill.

You may have thought that the thermometer was your friend when it comes to fleas. The facts may surprise you:

- ▼ Fleas can survive in colder climates. Fleas can survive indoors through the winter where temperatures are controlled.
- ▼ Pupae can remain dormant for several months, until conditions are ideal for them to emerge and survive as adult fleas.

Protect your cat year-round.

FLEA-RELATED DISEASE DANGERS FOR YOUR CAT	
Flea Allergy Dermatitis (FAD)	Inflammation, rash, severe itching, hair loss
Anemia	Pale gums, weakness
Tapeworm	Rough coat, weight loss
Skin Infections	Inflammation, itching, sores, hair loss
Tularemia	Listless, fever, chills, sore muscles, coughing, vomiting
Bartonellosis	Skin lesions, fever, muscle and joint pain, coma
Rickettsiosis	Fever, sore muscles, nausea, vomiting

More disturbing details.

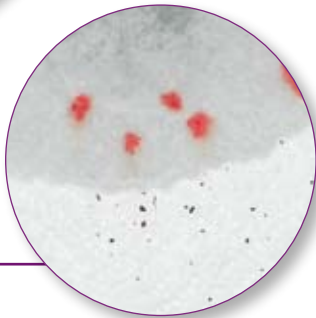

- ▼ Fleas multiply in your cat's bed, your bed, floors, furniture, closets, pillows, blankets, carpets, drapes and other dark corners of your house.
- ▼ Adult fleas are covered with little spikes that stick to fur, making them difficult to remove from the cat's hair coat.
- ▼ One pair of fleas can produce thousands of descendants in ideal conditions.

Flea eggs, larvae and pupae can be hiding almost anywhere

An adult flea can begin biting within seconds of jumping on your cat

Presence of flea dirt (tiny black particles that turn red when dropped on damp paper towel) could mean your cat has a flea problem

Your veterinarian's advice is the answer.

Protecting your cat from fleas is about protecting your pet's health. As your trusted animal health-care professional, your veterinarian is the best source for accurate information about which treatment, dose and regimen is best for your cat. This is why Vectra® for Cats & Kittens and Vectra for Cats® are available only through practicing veterinarians. When used monthly, and combined with regular visits to your veterinarian, Vectra for Cats & Kittens and Vectra for Cats can help you maintain the optimal health of your cat, and keep your household free from fleas and the serious diseases they may transmit.
